ANNOUNCING KEY ADDITION TO THE ELK TWO-WAY WIRELESS PRODUCT LINE

ELK Unveils Innovative Wireless PIR Motion Sensor

HILDEBRAN, NC, April 10, 2013 – ELK Products is proud to announce the newest addition to the two-way wireless family, the ELK-6030 Wireless PIR Motion Sensor. The PIR works with the M1 control along with the ELK-M1XRFTW Two-Way Wireless Transceiver. Intended to be used in residential and light commercial installations, the PIR incorporates advanced features designed to ensure reliability, ease of installation, and provide innovative security enhancements.

To simplify installation, ELK's Wireless PIR Motion Sensor allows the installer to remotely enable/disable Walk Test Mode from a keypad. Until now, the industry has accepted the process of manually tripping a switch on a one-way wireless PIR to enter walk test mode. The bright high-intensity white LED convenience/security light clearly identifies when the sensor is detecting motion.

Also as an industry first, the white LED convenience/security light offers several modes of activation and operation:

- Light is wirelessly triggered on-flashing during alarm events
- Light is locally tripped on-solid by motion while the control is in Away Mode. This feature provides enhanced camera lighting as the PIR wirelessly monitors arming state.
- Programmable light activation is also possible through M1 Rules to enable even more versatility.

-MORE-

ELK's leading two-way wireless technology for the M1 Control revolutionizes the reliability and functionality of wireless peripherals for homes and businesses. The two-way wireless product family includes the M1XRFTW Wireless Transceiver, the 6020 Slim-Line Door/Window Sensor, the 6021 Mini Window Sensor, the 6022 Universal Three Zone Sensor, and the attractive four-button 6010 key fob that provides a visual confirmation of arm status and alarm condition. Additional wireless devices, including a smoke detector and glass break, are under development.

About ELK Products, Inc.

ELK Products Inc. is a premium alarm and automation manufacturer. We provide a broad range of unique, yet versatile products to both commercial and residential markets including, controls, speakers, sirens, power supplies, timers, relays, PLCs, recordable voice units and battery testers. As a leader and innovator in the security and building control market, our mission is to provide cost-effective and innovative security and automation solutions to the professional trade with unsurpassed product quality and technical support.
