ELK PRODUCTS ANNOUNCES NEW TWO-WAY WIRELESS PANIC BUTTON

HILDEBRAN, NC – ELK Products, a premier manufacturer of security and automation solutions, is pleased to introduce the ELK-6011 Wireless Panic Button, featuring ELK’s industry leading two-way technology.

The ELK-6011 Wireless Panic Button features a single “press and hold” button plus, a red LED feedback indicator. The typical application for this sensor is activating a panic or emergency alarm. Each time the button is pressed and held, the ELK-6011 sends a unique TXID identifier to the transceiver and then listens for an acknowledgement.

This panic button is designed for use with the ELK-M1XRFTW Two-Way Wireless Transceiver for M1 Controls in residential and light commercial applications. ELK’s two-way technology constantly monitors and adjusts RF power levels to deliver clear signals while maximizing battery life. To ensure signals get through, ELK’s wireless utilizes 900 MHz frequency-hopping spread spectrum to increase signal diversity and agility.
