ELK PRODUCTS ANNOUNCES NEW TWO-WAY WIRELESS GLASS BREAK SENSOR

HILDEBRAN, NC – ELK Products, a premier manufacturer of security and automation solutions, is pleased to announce a new addition to their existing wireless line, the ELK-6040 Two-Way Wireless Glass Break Sensor.

This glass break sensor listens for actual patterns of breaking glass across the full audio band using Pattern Recognition Technology™. The factory set recognition patterns make it possible to detect the difference between breaking glass of windows in a building vs. a drinking glass breaking in a room.

As a two-way wireless device, the sensor listens after every transmission for a positive acknowledgment from the control. It does not waste energy repeating transmissions once acknowledged, prolonging battery life. The built-in two-way radio (RF) transmits alarm, supervisory and low battery messages to the control/receiver. Random frequency hopping ensures signal receipt and anti-jamming.

The ELK-6040 Two-Way Wireless Glass Break Sensor is designed for use with the ELK-M1XRFTW Two-Way Wireless Transceiver for M1 Controls, in residential and light commercial applications. For more information on ELK's Two-Way Wireless line visit www.elkproducts.com
