**ELK'S AWARD WINNING IP/CELLULAR ALARM COMMUNICATOR  
NOW AVAILABLE IN CDMA VERSION**

HILDEBRAN, NC – ELK Products, Inc. After a successful launch of their GSM Dual Path Alarm Communicator for areas covered by AT&T, T Mobile and Rogers Canada cellular networks, ELK is releasing the ELK-C1M1CDMA Dual-Path Alarm Communicator which supports CDMA cellular for areas covered by the Verizon cellular network.

C1M1 significantly reduces transmission time of emergency messages. It does not require dial capture or data bus decoding which leads to delays with other communicators. In addition, there is no cloud server to compromise or delay the communications.

C1M1 provides super-fast, full data communications to Central Monitoring Stations over IP and cellular pathways. Transmissions are automatically directed over the best pathway for quickest communications. Periodic tests are sent over both pathways to ensure reliable communications and C1M1 can automatically report a pathway outage over the remaining pathway.

C1M1 also supports remote access with no port forwarding or extra fees. Installers can easily activate and manage C1M1 communicators, as well as remotely program the M1 control over the IP or cellular pathway. Consumers can control the M1 remotely via the free ElkLink mobile app and web portal, as well as eKeypad and M1 Touch Pro third party apps. Additional features include email/text notifications for arm, disarm, and alarm events, as well as support for ELK's IP based software and interface partners.

Also available is the ELK-C1M14GSM which supports GSM networks.
